Professional Experience

2022/08 – Present
Remote

Software Engineer
Moises

- Implemented a complete Social Media Observability pipeline in a Microsservices model using Python, Terraform, Cloud Run, Pub/Sub and a few other GCP tools for data storage and analysis, allowing complete understanding of the current metrics on multiple social media platforms in real time.
- Implemented CRM and Automations using Salesforce, Apex, Google Apps Script, Google Cloud Services, and Python that improved the Influencer Marketing team's efficiency by over 60%
- Created the Google Cloud platform structure to host Python code that would interact with the CRM when prompted through messages sent from a Flask front-end, along with a continuous deployment workflow with GitHub Actions, to deploy said code
- Created a Lead Scoring Machine Learning model that improved on the team's capacity to evaluate the return on a lead before contact using Python, Pytorch, and Web/Social Media Scraping. This facilitated the closing of over 200 contracts in that quarter.
- Maintained and automated a database with over 10K leads

2021/07 – 2022/08
Remote

Software Engineer Intern
Moises

- Hired after getting 1st place on a challenge to create a Chord Recognition algorithm with better accuracy than their current solution
- Winning algorithm developed used Python with Machine Learning, Music Identification + Web Scraping libraries, along with a React-based front-end, to improve results using user-created chord sheets
- After being hired continued to improve the algorithm that eventually got adapted to production, and used in an app with 50M+ users

2017/07 – 2022/07
Recife, Brazil

PIBITI Researcher
UFPE

Researched and wrote papers on Software Requirements Engineering on the startup environment and IoT projects along with the professor Dr. Carla Silva

2017/08 – 2018/02
Recife, Brazil

Junior Backend Engineer
Accenture

- Worked on creating Bash Automations using the Unix system in order to provide daily health checks of ongoing projects
- Worked on reviewing and documenting legacy Java code

2017/01 – 2017/02
Recife, Brazil

Summer Job Project Intern
CESAR

- Was challenged to develop an app to help sales of the Moverio AR glasses by EPSON
- Within 1.5 months, I learned to create an Android app using Java and Android Studio, along with the OpenCV Image Recognition API
- Successfully created a solution that provided a real-time, guided tour of the city, by giving GPS instructions and recognizing key points around the city with the glasses' camera

Education

2017/01 – 2022/07
Recife, Brazil

Computer Science BS
UFPE (*Federal University of Pernambuco*)

Skills

Python, Typescript, Terraform, Google Cloud Platform, Salesforce/Apex, BigQuery, AI Integration, Web Scraping, Automation Engineering, PostgreSQL, Prompt Engineeing, Flask, RESTful, Integrations, Docker, FastAPI, Data Science/Analysis, CI/CD, DevOps

Languages

Portuguese
Native

English
Fluent
